FROZEN SHOULDER

frozen shoulder

*"See your
massage
therapist
immediately after
any shoulder
injury to prevent
frozen shoulder"*

As far as joints are concerned, the shoulder is truly remarkable. It moves in absolutely every direction. The only other joint that is even somewhat close in terms of the different types of movement is the hip. But even there, the mobility is much more limited.

You need a lot of movement in the shoulder to perform everyday activities. The

ligaments that hold the upper arm bone, the *humerus*, in the socket are quite loose to allow for this wide range of motion. Because they are lax, they don't do much to hold the shoulder together.

What really holds the shoulder together and stabilizes the joint are muscles that are referred to as the *rotator cuff*. There are four small muscles that

run from the shoulder blade to the humerus. These muscles completely surround the humerus like a sleeve or cuff. They are very dynamic, contracting to stabilize the shoulder when needed or relaxing to allow you to move the arm freely. The movement of our shoulder is so free and easy that we often take it for granted.

With frozen shoulder, you lose the ability to lift your arm to the side. Not only is the shoulder painful, but the neck and back muscles start to ache as they try to compensate for the limited shoulder movement.

"Your massage therapist can give you exercises to prevent or treat frozen shoulder."

how does a shoulder "freeze"?

Frozen shoulder, also called *adhesive capsulitis*, usually starts with a minor injury. For example, you may jar your shoulder by tripping and breaking your fall with an outstretched arm. It may also start after an inflammatory problem, like a little tendinitis or bursitis of the shoulder.

Because the shoulder is painful, you'll often limit your movement or stop using your shoulder to avoid any discomfort. Although it's important to

rest your body if it's injured, the rest period should be limited to just the first 24 to 48 hours following an injury. If you restrict your movement for any longer than that, *adhesions*, constricting bands of fibrous tissue, start to form within the shoulder joint.

You are always moving your shoulders, even if it's brushing your hair or reaching behind you to close the car door. Because of this ongoing movement, adhesions

don't normally have an opportunity to develop. Limit your movement for several days, however, and this fibrous tissue starts to stick to the ligaments in your shoulder, especially in the lower part of the joint where the ligaments are most lax.

Once these adhesions begin to form, the shoulder starts to feel stiff and uncomfortable.

the Pendulum exercise

Your massage therapist can give you exercises to prevent or treat frozen shoulder. This "Pendulum exercise" is used to maintain mobility in your shoulder. Bend forward from your hips and support the weight of your upper body. Let your shoulder relax and gently swing a small weight back and forth.

how does a shoulder “freeze” continued...

You'll limit your movement in response to the pain and the reduced movement causes more stiffness. Before you know it, you're trapped in what seems to be a vicious cycle.

If you don't take care of the problem immediately, it will progress from a little discomfort to severe pain that interferes with your daily activities and your sleep. It can become difficult or impossible to do simple things like brushing your hair, doing up your bra behind your back or even reaching your arm back to put it into the sleeve of your coat.

Over time, you will be unable to lift your arm. Your shoulder, in a sense, becomes frozen, hence the name. The pain in the shoulder can be

intolerable and will likely spread into your neck and arm as your body tries to compensate for the lost movement. If you catch the problem early, you can recover relatively quickly with some regular massage and some self-care exercises that you can do at home. Otherwise expect a lengthy and somewhat uncomfortable course of treatment to regain your normal pain-free movement.

The conventional treatment for a severe case is manipulation under anesthetic. A surgeon will put you under and while you are asleep will force your shoulder through a full range of motion to pull apart the adhesions. Sometimes surgery is used. In either case, don't

expect a quick fix. This kind of treatment is usually followed by several months of physical therapy or massage therapy.

For moderate cases, doctors may use oral anti-inflammatory drugs, or they may inject cortisone or anesthetic medications into your shoulder to reduce the pain and inflammation.

Your massage therapist will typically treat frozen shoulder through a combination of massage techniques, stretching and possibly joint mobilization procedures. This will be combined with exercises that you must do between treatments. Your therapist will suggest a treatment schedule that is best for you. You'll likely need frequent short treatments that may last for many weeks.

exactly like symptoms of frozen shoulder. These knots refer pain into the shoulder in the same way and cause your movement to be limited in a similar pattern.

Unlike frozen shoulder, however, these trigger points can be deactivated, sometimes very quickly. Relief can be had after only a few sessions.

Massage therapists are able to assess for these trigger points and help eliminate them from your muscles. Your therapist may do hands on work to the muscle to get rid of the knot or they may use a gentle stretch technique where they will have you first contract and then relax the muscle as they pull it into a stretched position. There are a variety of approaches that can be taken and your massage therapist will choose the most appropriate techniques for your needs.

About Cascade Massage Therapy

My Approach

I bring over 18 years of bodywork experience and education to the massage table! I offer you diverse and comprehensive massage therapy sessions. Your treatment goals are foremost and your needs will be heard and addressed. I utilize both traditional and alternative treatment techniques, and recommend self care tips and exercise options that evolve with your individual healing process.

My intention is to be a facilitator in the cascade of your healing process and health maintenance. I believe that within the human body is the desire and ability to be well, and through

bodywork, I serve to act as a catalyst for this process.

This is your time - I encourage you to enjoy the stillness of your session, and sense the changes occurring in your body while we work - you don't need to be entertaining or start a conversation; that being said, please recognize that I do not read minds. I expect my clients to participate in his or her experience and give feedback when there is any discomfort during the treatment.

Cascade Massage Therapy is focused on education and prevention. It is important that you know what you can do to help prevent stress, tension, and pain when you are not with me. I allow for time at the end of our session to converse, suggest self care tips and exercises that would be beneficial for you, and answer any questions that you may have.

I believe that prolonged stress, whether environmental, physical or emotional is a primary factor in dis-ease and a true obstacle to healing. Therefore, ***I welcome you to a peace-filled and relaxing environment where you can experience relief from pain and tension.***
